ORGANIC SHARE OF GA4 SESSIONS

Audit date: 28 August 2026

Data through: 25 August 2026 for GSC and GA4

Prepared from: live crawl, Google Search Console, GA4, published Google Tag Manager container, browser-rendered mobile/desktop tests, public local citations and competitor research

Status: Confidential · diagnosis and implementation roadmap · no live-site changes made

Executive decision summary

Organic visibility is growing quickly, but the site currently has three material constraints on turning that growth into qualified enquiries:

1. **A priority registration URL sends prospects and SEO signals to another CA firm.** `/private-limited-company-registration/` returns a permanent redirect to `anamca.com`, and Google confirms the external URL as canonical. Four other internal URLs also redirect there.
2. **Conversion reporting is not trustworthy.** The published GTM WhatsApp trigger fires on every link click, not only WhatsApp clicks. GA4 consequently reports 587 `whatsapp_click` events and 585 key events that cannot be treated as genuine WhatsApp enquiries. Successful form submissions are not tracked.
3. **The pages with the strongest search opportunity need trust, snippet and conversion work.** Accounting, NRI taxation, ITR filing, GST filing and 12A/80G pages already receive meaningful impressions, but their click-through rates and commercial journeys are weak relative to their visibility.

The site is not suffering a sitewide indexing failure. The homepage and sampled priority pages are indexed, the sitemap is valid, HTTPS/non-WWW enforcement works, and organic search is already the main acquisition channel. The best growth path is therefore to fix lead leakage and measurement first, then improve pages that Google is already showing—before publishing a large volume of new articles.

Verified baseline

Metric	Current verified value	Interpretation
GSC clicks, last 90 days	3,744	A meaningful organic base already exists
GSC impressions, last 90 days	402,561	Google is testing the site across a broad query set
GSC CTR	0.93%	Large snippet and intent-alignment opportunity
GSC weighted average position	7.84	Many results sit on page one, but not yet in the strongest click positions
Last 30 days vs first 30 days — clicks	+83.2%	Strong positive momentum
Last 30 days vs first 30 days — impressions	+49.7%	Visibility is expanding rapidly
Last 30 days vs first 30 days — CTR	+22.4% relative	Snippet performance improved, but remains low overall
GA4 organic sessions	2,533	Covers only 19 July–25 August because the property was created on 19 July
Organic share of all GA4 sessions	81.7%	SEO is the dominant acquisition channel
Organic engagement rate	56.8%	Useful content engagement, with a mobile gap
Organic sessions from India	2,463 / 2,533	Audience is geographically relevant at country level
Organic sessions attributed to Mumbai	420 / 2,533	Only 16.6% is explicitly Mumbai; much traffic is national informational traffic
Published GTM container	Version 5 · 4 tags · 2 triggers	Connected and live, but conversion logic is incomplete

Historical limitation: GSC data begins on 2 May 2026 and GA4 begins on 19 July 2026. A year-over-year conclusion is not possible yet.

Audit status by workstream

Workstream	Status	What it means
Search visibility	Growing	Strong recent gains and several page-one opportunities
Crawlability & core indexation	Mostly healthy	Priority pages inspected are indexed; no robots/sitemap failure
Lead ownership	Critical issue	Company-registration traffic is redirected to another firm
Analytics & conversion tracking	Unreliable	WhatsApp is overcounted; form success is not measured
Commercial page coverage	Needs expansion	Company, LLP formation, ROC/company compliance, GST consultancy/compliance and internal audit gaps
On-page CTR	High opportunity	Multiple high-impression pages have CTR below 1%
Trust / E-E-A-T	Weak on core pages	Practitioner identity and firm credentials are not clearly presented
Mobile performance	Needs improvement	Measured mobile LCP exceeded 2.5s on all nine sampled pages
Local SEO	Blocked by address conflict	Website/citations/ICAI sources show different unit/floor variants
Structured data	Mixed	Good Organization/LocalBusiness base, but two invalid FAQ JSON-LD blocks and inconsistent service markup

What is connected

Platform	Connection result	Scope verified
Google Search Console	Connected	URL-prefix property https://cashahnawaz.com/ ; service account is a restricted user; performance, sitemaps and URL Inspection work
Google Analytics 4	Connected	Property 546098812, stream G-1SFXZJSYYY , created 19 July 2026; reporting API works
Google Tag Manager	Connected	Account "Shahnawaz And Associates"; container GTM-N2LHGRCX ; published version 5 inspected
Google Business Profile	Not connected to this audit	GBP categories, services, primary address, reviews, posts and performance remain unavailable
WordPress Admin / hosting panel	Not logged into	Plugin fingerprints were verified publicly; versions and admin-only settings were not confirmed

No further action is needed to connect GSC, GA4 or GTM. To close the remaining access gaps, provide WordPress Administrator access and Google Business Profile Manager access when implementation begins. A Domain-property GSC permission would also be preferable to the current restricted URL-prefix access, but it is not required for the recommendations in this report.

Priority action plan

P0 — protect leads and restore trustworthy data (days 1–7)

Action	Owner	Effort	Success check
Restore an owned Private Limited Company Registration page and remove the redirect to <code>anamca.com</code>	WordPress/hosting	Medium	Cashahnawaz URL returns 200, self-canonical, own phone/form/GTM, included in sitemap
Audit and remove the four other unintended external redirects	WordPress/hosting	Low–Medium	No internal URL redirects to an unrelated business
Restrict the GTM WhatsApp trigger to actual WhatsApp URLs	Analytics	Low	GTM Preview fires only on <code>wa.me</code> / approved WhatsApp links
Track successful Elementor form submissions	Analytics + WordPress	Medium	A real successful test creates one GA4 lead event; failed/abandoned forms create none
Preserve the current phone-click trigger and validate it	Analytics	Low	One phone click produces one <code>phone_click</code> event
Annotate GA4 reporting from 19 July until the GTM fix as contaminated for WhatsApp/key-event analysis	Analytics	Low	Dashboards clearly exclude or label the invalid period

P1 — improve pages Google already shows (weeks 2–4)

1. Rework homepage positioning around “Chartered Accountant / Tax Consultant in Mumbai,” with verified practitioner credentials, service proof and a specific enquiry CTA.
2. Upgrade Accounting, NRI, ITR Mumbai, GST Return Filing and 12A/80G pages using the page plan below.
3. Add a visible, verified CA bio and firm identity to the homepage, About page and money-page author/reviewer blocks.
4. Confirm the authoritative office unit/floor and standardize website, schema, GBP and major citations.
5. Reduce mobile hero and page-builder load cost, starting with the homepage and highest-opportunity money pages.

P2 — build topical and commercial depth (weeks 5–12)

1. Build owned pages only for services the firm genuinely provides: LLP Registration, ROC/Company Annual Compliance, GST Compliance/Consultancy, and Internal Audit.
 2. Repair invalid schema, indexable AJAX variants and confirmed internal 404 links.
 3. Build contextual internal links from high-traffic guides into matching service pages.
 4. Introduce a regulated-content review workflow with a named CA reviewer and visible “reviewed on” date.
 5. Improve Google Business Profile and citation consistency after the address is confirmed.
-

Page-by-page implementation register

Use this register as the working queue. Complete **P0 before P1**, take a backup before changing templates or redirects, and test changes on staging where possible. Do not change a URL slug merely to insert a keyword. Any tax, legal, filing-year, threshold or deadline change must be approved by a practising CA before publication.

The companion spreadsheet, [Page-Implementation-Register-2026-08-28.csv](#), contains the same work in a filterable format for assigning owners and recording completion.

P0 — immediate ownership, lead and trust repairs

URL / scope	Work to implement	Owner	Completion test
/private-limited-company-registration/	Remove the cross-domain redirect and publish an owned Cashahnawaz service page. Add a self-canonical, firm phone/WhatsApp/form, verified process, documents, realistic timelines, FAQs, Service schema and sitemap entry. Do not copy another firm's text.	Owner + CA + WordPress + SEO	Returns 200 on cashahnawaz.com ; self-canonical; Cashahnawaz branding/tracking only; submitted in sitemap and inspected in GSC
/annual-compliances-for-private-limited-company/	Confirm this is a service offered. If yes, replace the Anam redirect with an owned ROC/annual-compliance page; if no, remove Cashahnawaz internal links and redirect only to the closest genuinely equivalent owned service.	Owner + CA + WordPress	No cross-domain redirect; destination matches the same user intent and business
/difference-between-accounting-and-bookkeeping/	Confirm content ownership. Restore and improve it as an original supporting guide, or redirect it to /accounting-services/ only if that page satisfies the query. Remove every internal link if the URL is retired.	Owner + Content + SEO	No Anam destination; final URL is owned, relevant and one hop
/gst-council-constitution-functions-and-decision-making/	Confirm content ownership. Restore an original CA-reviewed explainer or consolidate into a genuinely relevant owned GST guide. Do not redirect informational visitors to an unrelated sales page.	Owner + CA + Content	No Anam destination; facts reviewed; relevant owned final page
/instant-tips-on-income-tax-deductions-that-you-can-start-figuring-out-today/	Confirm content ownership. Restore an original current guide or consolidate into a relevant income-tax guide after professional review.	Owner + CA + Content	No Anam destination; all tax claims dated/reviewed; owned canonical
All pages / GTM container	Add a filter to the WhatsApp click trigger so it fires only for approved wa.me , api.whatsapp.com or WhatsApp application links. Preserve and test the tel: trigger.	Analytics	GTM Preview: ordinary navigation produces no WhatsApp event; one real WhatsApp click produces exactly one event

URL / scope	Work to implement	Owner	Completion test
All Elementor forms	Fire <code>generate_lead</code> or <code>form_submit_success</code> only after Elementor confirms a successful AJAX submission. Include <code>form_name</code> , <code>service</code> and <code>page_location</code> ; mark only the success event as a GA4 key event.	Analytics + WordPress	One successful controlled form submission creates one GA4 event; errors, starts and button clicks do not
<code>/about-us/</code>	Replace the rendered <code>0</code> , <code>0%</code> , <code>0</code> , <code>0+</code> counters with verified values or remove the counters. Add the verified practitioner name, membership/FRN, experience, services and professional-review role.	Owner + CA + WordPress	No zero counters; credentials match owner-approved records; mobile and desktop render correctly
<code>/contact-us/</code> , homepage, footer and sitewide schema	Confirm the authoritative office address, then use exactly one NAP format everywhere. Do not make this change until the owner resolves C-18 vs B38 vs B-110.	Owner + WordPress + Local SEO	Visible NAP, schema, GBP and priority citations match exactly

P1 — pages already earning visibility

URL	Work to implement	Do not do	Validation
/	Rewrite the first screen around “Chartered Accountant and Tax Consultant in Mumbai”; show a visible service-specific CTA, verified CA identity, clear phone/WhatsApp choices and links to the six priority service groups. Simplify the Elementor hero and optimize its LCP asset.	Do not remove the current local relevance or change the homepage URL	Re-test mobile LCP; inspect title/snippet; test every CTA; monitor <code>ca in mumbai</code> and <code>tax consultant mumbai</code>
/when-can-i-expect-my-itr-refund/	Add one descriptive H1; update the refund-status/process steps; rewrite title/meta for the actual refund query; add a current reviewed date and contextual CTA/link to <code>/income-tax-return-filing-in-mumbai/</code> .	Do not turn the guide into a thin sales page or change its slug	One H1; CA approval; self-canonical; CTR monitored against the 53,708-impression baseline
/accounting-services/	Rewrite title/meta, H1 and first screen around CA-supervised accounting, bookkeeping, MIS and reporting in Mumbai. Correct copy quality, explain deliverables/frequency/software/handoff, add proof, one main form and contextual links from accounting guides.	Do not create separate thin pages for every keyword variant	Valid <code>Service</code> schema; one form; CTA tracked; monitor <code>accounting services in mumbai</code>
/itr-filing-for-nri-guide-for-non-resident-taxation/	Separate guide content from engagement details; add named CA reviewer, remote-client workflow, document checklist, NRI-specific situations handled, response expectations and a page-specific enquiry CTA.	Do not claim international capability or outcomes that cannot be evidenced	CA review; one lead path; valid schema; monitor NRI query CTR and qualified enquiries
/income-tax-return-filing	Professionally correct the AY 2020–21 FAQ and review every year, threshold and penalty. Reduce repetitive exact-match copy, strengthen current-year/local proof, improve title/meta, fix FAQ JSON-LD and track the form success.	Do not update regulated figures without CA sign-off	Schema validates; stale AY reference removed/reframed; test lead; monitor page-one queries

URL	Work to implement	Do not do	Validation
-in- mumbai /			
/12a- or- 12aa- or- 80g- regist ration -new- scheme /	Review all transitional 2021–22 dates; broaden the page around current 12AB/80G registration intent; add eligibility, documents, process, renewal/revalidation distinction, named reviewer, CTA and links from NGO/ITR-7 content.	Do not present expired dates as current	CA approval; current review date; valid schema; improved internal links
/gst- return - filing /	Expand return types, reconciliation, records handoff, notice/error support, service cadence and boundaries. Replace generic CTA, reduce duplicate forms and repair malformed FAQ JSON-LD.	Do not create competing pages for gst filing services and gst return filing services	Schema validates; one main form; tracked CTA; monitor both query clusters
/gst- regist ration - online /	Make the page the canonical owner for GST registration. Add eligibility, documents, process, post-registration obligations, local proof and page-specific CTA. Resolve overlap with the old GST guide below.	Do not publish another near-duplicate GST registration sales page	Self-canonical; unique intent; relevant internal links; monitor local queries
/llp- annual - filing /	Update FY 2021–22 framing after CA review; clarify Forms 8/11 and the current annual-compliance process; add deadlines only with a review date; link to the future LLP Registration page without merging the two intents.	Do not combine LLP formation and annual filing into one page	CA-approved current copy; clearer title/H1; contextual links from compliance content
/sect ion-8- compan y- regist ration /	Review regulatory accuracy; improve title/meta, process, documents, eligibility and after-registration compliance; add links from 12A/80G, ITR-7 and Section 8 vs Trust content.	Do not imply Section 8, trust and society are identical structures	CA approval; at least four relevant contextual links; lead event tested

URL	Work to implement	Do not do	Validation
/audit-services/	Split the visible service coverage into statutory audit, tax audit and internal audit sections with scope, ideal client, process and deliverables. If internal audit is active and substantial, build the dedicated page listed under P2. Stabilize the layout causing CLS.	Do not publish unverifiable client counts or audit outcomes	Mobile CLS at or below 0.1 in repeat lab tests; service scope approved
/startup-registration-india/	Clarify what “startup registration” means, distinguish incorporation from DPIIT recognition, explain deliverables/eligibility/documents, add owned-company/LLP pathways and a specific founder CTA.	Do not conflate Startup India recognition with company incorporation	CA/legal review; internal links to the correct formation pages; lead tracked
/public-limited-company/	Review current process and compliance claims, strengthen qualification criteria/documents/timeline boundaries, add trust proof and connect it to the future ROC compliance hub.	Do not use private-company keywords for this page	Current reviewed date; distinct title/H1; valid Service schema
/tds-return-filing-services/	Review current forms, due dates, penalties and correction process; add service cadence, documents, reconciliation and notice-support scope; track a page-specific CTA.	Do not leave undated compliance tables	CA approval and visible review date; successful test lead
/trademark-registration/	Clarify this is a supported service, improve process/search/opposition boundaries and proof, and correct footer links that still point through legacy paths.	Do not imply guaranteed registration	One canonical URL; no legacy-path hops; claims reviewed
/contact-us/	Reduce the mobile hero height, put phone/WhatsApp/form above the fold, show the confirmed address and hours, retain one concise form and add privacy/data-use text beside submit.	Do not publish an address until the owner confirms it	Mobile render checked; all contact actions work; one successful lead event

P1 — high-traffic industry and supporting pages

Apply a shared pattern to every industry page: retain the industry-specific tax intent, add a named CA reviewer and visible review date, remove generic filler, explain the exact records/risks/forms relevant to that industry, link to the main ITR service, and use one contextual CTA. The URL-specific exceptions are below.

URL	Additional implementation required
<code>/itr-filing-for-healthcare-industry/</code>	Protect its strong visibility; review profession/business-income distinctions and healthcare-specific records before changing the snippet
<code>/itr-filing-for-crypto-trading-in-india/</code>	Professionally verify the current tax/TDS/loss-treatment content and date every regulated claim
<code>/itr-filing-for-food-and-beverage-industry/</code>	Keep as the only Food & Beverage URL; replace links pointing to obsolete food/beverage slugs
<code>/itr-filing-for-content-creators-influencers/</code>	Verify platform income, foreign receipts, GST and expense examples; improve the service handoff
<code>/itr-filing-for-beauty-wellness-industry/</code>	Repair obsolete Food & Beverage and Real Estate internal links
<code>/itr-filing-for-wholesale-retail-trade-industry/</code>	Replace the broken <code>/company-registration/</code> link with the restored private-company page or another contextually correct destination
<code>/itr-filing-for-event-management-and-entertainment-professionals/</code>	Verify TDS/GST/expense examples and add event-specific record requirements
<code>/itr-filing-for-e-commerce-industry/</code>	Replace the obsolete Food & Beverage URL and review marketplace/GST/TCS claims
<code>/itr-filing-for-real-estate-construction/</code>	Make this the only owned Real Estate/Construction URL and replace links to the obsolete <code>-industry</code> variant

P1/P2 — regulated and time-sensitive content refresh queue

URL	Required decision and work	Priority
/mca-extension-due-date-of-annual-filing/	Rewrite as an explicitly historical FY 2020–21 update or consolidate into a current ROC compliance resource; correct its title/meta and remove false freshness signals	P1
/charitable-trusts-alert-its-time-reapply-for-tax-exemption-before-30th-sep/	The September 2025 deadline has passed. Update with CA-verified present treatment or label/archive it clearly and link to the current 12AB/80G service	P1
/gst-new-update-due-dates-for-october-2021/	Mark as a historical October 2021 calendar or remove from current discovery surfaces; never change old dates to new dates without rebuilding the content	P1
/due-date-calendar-for-the-month-of-november-2022/	Archive as November 2022, noindex if it has no continuing search value, and remove from current navigation/widgets	P2
/gst-amnesty-scheme-2023/	Add an expired-scheme notice and historical context; review whether a newer scheme warrants a separate current article	P2
/memorandum-explaining-the-provisions-in-the-finance-bill-2023/	Preserve as historical analysis; repair the broken /msme-ssi-registration/ link and add publication/review context	P2
/the-best-accounting-software-for-small-businesses-in-2023/	Refresh the comparison with current products and a transparent review date, or label it as a 2023 archive	P2
/june-2026-important-due-dates/	Keep the original month/year immutable; after expiry add a historical notice and link to the current due-date hub	Recurring
/due-date/july/ and /due-date/august/	Use a controlled annual update process with reviewed dates, accurate year in title/H1 and an archive policy; never silently reuse outdated monthly URLs	Recurring
/tds-chart-for-fy-2026-27/	Schedule a CA review before each financial year; retain the FY-specific URL/content as an archive when the next chart is published	Recurring

P2 — technical URL and internal-link repairs

URL / source	Implementation	Validation
/gst-registration-services-india-a-guide-to-gst/	Decide whether unique informational value remains. If not, 301 to /gst-registration-online/ and remove from internal links. If retained, use an HTTPS self-canonical, differentiate guide intent and include it in the sitemap.	One canonical owner; no HTTP canonical; GSC inspection agrees
/?jkit-ajax-request=jkit_elements and pagination variant	Prevent crawl/index generation using the responsible Elementor/JKit setting or server rule; return a non-indexable response and ensure no internal discovery. Do not block in robots.txt before Google can see removal signals.	Live response is not indexable; no canonical ambiguity; validate in GSC
/mca/ and /donation/	These are thin one-item archives. Either build useful maintained hubs or noindex/remove them from the sitemap and link directly to the article.	Index directive and sitemap treatment match the chosen purpose
Useful paginated archives	Give each useful pagination page a self-canonical and crawlable next-page path. Noindex or consolidate archives that have no standalone value.	Crawl deeper posts; inspect canonical on page 2+
/itr-filing-for-beauty-wellness-industry/	Replace obsolete Food & Beverage and Real Estate/Construction targets with the live canonical URLs.	Crawl reports no 404 targets
/itr-filing-for-e-commerce-industry/	Replace the obsolete Food & Beverage target with /itr-filing-for-food-and-beverage-industry/ .	Link returns 200 directly
/itr-filing-for-wholesale-retail-trade-industry/	Replace /company-registration/ after the owned company-registration destination is restored.	Link returns 200 directly
/memorandum-explaining-the-provisions-in-the-finance-bill-2023/	Replace/remove /msme-ssi-registration/ depending on whether a genuine MSME service/resource exists.	No broken link; anchor matches destination
/trademark-classes/	Replace/remove /online-trust-registration/ ; it is not contextually suitable unless the surrounding copy genuinely discusses trust registration.	No broken or misleading link
/bombay-hc-gst-bank-recovery-notice/ and	Restore the missing cited PDF only if it is the correct licensed/public document; otherwise replace it with the	Asset/source returns 200 and matches the

URL / source	Implementation	Validation
/madras-high-court-gst-notice-service-judgment/	authoritative source or remove the link.	citation
Service-page schema template	Use stable Organization + Breadcrumbs sitewide and accurate Service markup on genuine service pages. Repair the two invalid FAQ blocks; use Article/BlogPosting only on editorial pages.	Rich Results Test/Schema Validator passes and visible content matches markup
Elementor service template	Keep one main embedded form plus the global popup, reduce hero height/DOM, load only the actual LCP asset early, defer non-critical scripts and replace generic “GET IT NOW” text.	Two-run mobile lab retest plus form/CTA test on every template family

P2 — new pages to create only for services actually offered

Suggested URL	Page purpose	Minimum implementation
/llp-registration/	LLP formation—not annual filing	Eligibility, partners/designated partners, documents, process, deliverables, realistic timeline boundaries, FAQs, Service schema and links to /llp-annual-filing/
/roc-annual-compliance/	Company/OPC/Section 8 annual compliance hub	Entity-specific sections, AOC/MGT scope, records checklist, engagement cadence, CA-reviewed current treatment and links from company-registration pages
/gst-compliance-services/	Ongoing GST compliance/consultancy, only if distinct from return filing	Reconciliation, notices, registrations/amendments, advisory boundaries and clear differentiation from /gst-return-filing/
/internal-audit-services/	Dedicated internal-audit service, only if actively delivered	Scope, risk areas, process, deliverables, sectors served, confidentiality and team credentials
/tax-consultancy-services/	Ongoing tax advisory/compliance hub	Audience, recurring scope, advisory workflow, boundaries, proof and links to ITR/TDS pages; avoid duplicating the homepage

Implementation sequence and release checks

1. **Backup and baseline:** export WordPress/database and the current GTM version; save current title/meta, schema and GSC metrics for each page being changed.
2. **Fix P0:** external redirects, analytics, form success tracking, zero counters and confirmed NAP.
3. **Release P1 in small batches:** update two to four pages at a time. Preserve URLs and avoid simultaneous sitewide title changes.
4. **QA every batch:** mobile/desktop visual test, status/canonical/indexability, title/H1, schema, links, form/phone/WhatsApp events and sitemap inclusion.
5. **Request indexing selectively:** use GSC URL Inspection for materially improved P0/P1 pages; do not submit every unchanged URL.
6. **Measure after 28 days:** compare clicks, impressions, CTR, position and valid leads against the saved baseline. Keep changes that improve qualified outcomes; diagnose pages that decline before rewriting again.

Pages not named in this register have no verified urgent defect. Keep them published, monitor performance, and include them in the quarterly accuracy/link review rather than rewriting them without evidence.

Search performance and audience analysis

Growth trend

The latest 30 days produced **1,513 clicks from 147,877 impressions**, compared with **826 clicks from 98,800 impressions** in the first 30 days of the 90-day window. Weighted average position improved by **0.78 positions**. This is healthy momentum, not a reason to rebuild the site or change every URL.

The opportunity is concentrated in moving already-visible pages higher and earning more clicks at the same rank. The ten highest-click pages account for approximately **45.1%** of page-level clicks, so focused upgrades can materially influence the total.

Audience fit

- Organic search supplies **81.7%** of all GA4 sessions.
- **97.2%** of organic sessions are from India.
- Mumbai is the largest city at **420 sessions**, but represents only **16.6%** of organic sessions. Bengaluru, Delhi, Chennai, Kolkata, Pune and Hyderabad are also significant.
- Desktop accounts for **69.4%** of organic GA4 sessions, while mobile accounts for **30.7%**.
- Mobile organic engagement is **47.4%**, materially below desktop at **61.1%**. Mobile layout and speed therefore need attention even though desktop currently leads traffic.
- Traffic is heavily driven by ITR industry guides, due-date resources, tax guides and case-law content. This is valuable reach, but it needs clear service pathways to become qualified enquiries.

Priority page opportunities

Page / role	Clicks	Impressions	CTR	Avg. position	Recommended focus
ITR refund guide	113	53,708	0.21%	6.8	Add a real H1, align snippet to refund-status intent, update for current process, link to ITR service
Homepage	432	25,813	1.67%	10.5	Improve local CA/tax-consultant positioning, visible hero message and practitioner proof
NRI taxation guide/service	77	10,647	0.72%	8.7	Strengthen service intent, named reviewer, remote-client process, CTA and NRI proof
Accounting services	32	10,377	0.31%	19.1	Reframe around CA-supervised bookkeeping/MIS, fix copy quality, improve local snippet and proof
12A/80G registration	68	11,102	0.61%	9.8	Professional regulatory review, broaden H1, improve service CTA and trust
ITR filing Mumbai	91	8,619	1.06%	6.4	Protect page-one position; improve snippet, proof, valid schema and lead tracking
GST return filing	15	2,413	0.62%	10.0	Expand deliverables/reconciliation/process, add document handoff, fix schema and CTA
LLP annual filing	4	614	0.65%	8.9	Refresh old-year content and distinguish compliance from LLP formation
Section 8 registration	0	594	0%	9.3	Add relevant internal links, precise snippet, current legal review and clear process
GST registration	0	295	0%	12.4	Consolidate overlapping GST pages; improve local intent, proof and documents/process
Audit services	0	25	0%	6.6	Build authority and dedicated internal-audit depth; visibility is currently too small for CTR diagnosis

Query-to-page map

Query cluster	Current landing page	Evidence	Action
ca in mumbai	Homepage	749 impressions, 14 clicks, avg. position 3.0	Preserve relevance; improve snippet and visible firm credentials
tax consultant mumbai / tax consultant in mumbai	Homepage	532 combined impressions; positions 6–7 range	Add a clearer tax-consultant proposition and service proof
accounting services	Accounting	904 impressions, 5 clicks, position 7.6	Rewrite title/meta and first screen around outcomes and CA supervision
accounting services in mumbai	Accounting	247 impressions, 0 clicks, position 5.3	High-priority CTR test; local proof and specific deliverables
itr filing in mumbai	ITR Mumbai	249 impressions, 7 clicks, position 3.0	Protect intent alignment; strengthen pricing/proof and conversion tracking
income tax return filing mumbai	ITR Mumbai	233 impressions, 0 clicks, position 4.7	Improve snippet differentiation and current-year clarity
gst filing services	GST Return Filing	380 impressions, 3 clicks, position 13.7	Move toward page one through content depth and links
gst return filing services	GST Return Filing	270 impressions, 0 clicks, position 13.9	Same page; no new competing page needed
12a registration online	12A/80G page	306 impressions, 3 clicks, position 7.9	Refresh, broaden scope and improve CTA
online tax consultant	Homepage	367 impressions, 1 click, position 10.6	Explain remote/online process and response expectations

Content direction: do not create separate pages for minor keyword variants that already map cleanly to one page. Improve the existing owner page and its supporting links.

Measurement and conversion audit

Confirmed published GTM setup

Published tag	Trigger	Audit result
GA4 Integration (G-1SFXZJSYYY)	Initialization / all pages	Connected and live
Website Menu Phone Click	Link click where Click URL starts with tel:	Logic is appropriately restricted; validate in Preview and GA4 DebugView
GA4 — WhatsApp Click	Link click with no filter	Defective: fires on every link click
"Hotjar" tag	All pages	Loads a Contentsquare UX script; name and vendor should be normalized in documentation

GA4 evidence

- whatsapp_click : 587 events, 204 users, 585 key events.
- phone_click : 7 events, 6 users, 5 key events.
- form_start : 12 events, but there is **no successful form-submission/lead event**.
- Organic reports show **360 key events**, but these are largely contaminated by the WhatsApp trigger.
- (not set) accounts for **230 organic landing sessions** with only **3.9% engagement**, which should be investigated after event/session tagging is corrected.

Required measurement design

Use one clear lead taxonomy:

User action	GA4 event	Key event?	Required parameters
Successful enquiry form	<code>generate_lead</code> or <code>form_submit_success</code>	Yes	<code>form_name</code> , <code>service</code> , <code>page_location</code>
WhatsApp click	<code>whatsapp_click</code>	Yes	<code>click_url</code> , <code>page_location</code> , optional <code>service</code>
Phone click	<code>phone_click</code>	Yes	<code>phone_number</code> , <code>page_location</code>
Email click	<code>email_click</code>	Optional	<code>email_address</code> , <code>page_location</code>

For Elementor forms, fire the lead event only after the AJAX success response or on a unique success/thank-you state—not on button click or form start. Use GTM Preview, GA4 DebugView and one real controlled submission per form family before publishing.

Technical SEO findings

What is healthy

- `robots.txt` is accessible and points to the sitemap index.
- The sitemap index and its post/page/category sitemaps return 200 with no GSC warnings or errors; 108 web URLs are submitted.
- HTTP redirects to HTTPS in one hop; `www` redirects to non-`www` in one hop.
- The homepage and all sampled owned priority pages are mobile-crawled, allowed and indexed according to GSC URL Inspection.
- Sitemap priority pages return 200 and are indexable.
- Legacy URL redirects sampled earlier resolve in one hop.

Concentrated technical issues

1. **Cross-domain permanent redirects:** five cashahnawaz.com URLs redirect to `anamca.com`, including the priority Private Limited Company Registration page.
2. **Indexable AJAX crawl variants:** `/?jkit-ajax-request=jkit_elements` and a pagination variant return indexable 200 pages without canonicals. GSC confirms the homepage parameter variant was crawled and is currently not indexed.
3. **Duplicate GST page outside the sitemap:** `/gst-registration-services-india-a-guide-to-gst/` is indexed, but its declared canonical uses HTTP. Google selects HTTPS. It overlaps the main GST Registration page and a registration guide.
4. **Broken internal links:** confirmed source pages link to obsolete company-registration, ITR-industry, MSME, trust-registration and PDF URLs.
5. **Pagination canonical inconsistency:** several paginated archive URLs canonicalize to page one. This can suppress discovery of deeper archive content; use self-canonicals for useful paginated pages or noindex/archive consolidation where appropriate.
6. **No HSTS header observed:** this is a security-hardening opportunity, not a primary ranking issue. Confirm compatibility before enabling at the CDN/hosting layer.

The GSC sitemap API returns an `indexed: 0` field, but this conflicts with URL Inspection and live search performance. It is therefore treated as an unpopulated API field, not as evidence of an indexing collapse.

Content, on-page and E-E-A-T audit

Strong assets to protect

- Industry-specific ITR pages are generating substantial visibility and traffic.
- The NRI guide, ITR Mumbai page and current due-date resources have strong content depth.
- Google already associates the homepage with valuable local queries such as “CA in Mumbai.”
- The current homepage, About, Contact and on-site schema use one consistent phone and C-18/Ground Floor address family.
- Current Organization/LocalBusiness markup exists on the homepage and Contact page.

Trust and identity gap

The rendered About page shows:

- COMPLETED PROJECTS 0
- SATISFACTION RATE 0%
- ONLINE CONSULTING 0
- BUSINESS REGISTRATIONS 0+

After an eight-second rendered check, these values remained zero. Neither the homepage nor the About page visibly included “CA Shahnawaz,” “Shahnawaz Shaikh,” FRN, membership number or ICAI terms in body text.

The public ICAI firm list provides a strong trust asset—**Shahnawaz And Associates, FRN 151767W; Shahnawaz Shaikh, membership 194241**—but also displays a B38 office-unit variant. Confirm that these details are current, then add a professionally written practitioner profile, firm-registration detail and reviewed-by block. Do not publish credentials until the firm verifies them.

Regulated-content governance

Several pages contain passed years/deadlines without strong historical framing, including:

- MCA annual-filing relief content for FY 2020–21: **5,939 impressions / 62 clicks**.
- Charitable-trust reapplication deadline of September 2025: **6,174 impressions / 36 clicks**.
- ITR Mumbai FAQ reference to AY 2020–21 on a current service page: **8,619 impressions / 91 clicks**.
- LLP content labelled FY 2021–22: **614 impressions / 4 clicks**.
- 12A/12AA/80G transitional dates from 2021–22: **11,102 impressions / 68 clicks**.

These are not replaced with new figures in this audit. A practising CA should verify the governing law, date, threshold and correct treatment. Then each page should be updated, clearly archived as historical, consolidated, or redirected according to continuing search intent.

Commercial content gaps

Create or expand only where the service is genuinely offered:

Gap	Recommended owned page / treatment	Priority
Private Limited Company Registration	Restore the existing Cashahnawaz URL as an owned page	Immediate
LLP Registration	Create formation page; keep LLP Annual Filing separate	High
ROC / Company Annual Compliance	Create one strong hub with AOC-4/MGT-7 and entity-specific sections	High
GST Compliance / Consultancy	Expand GST Return Filing or create one ongoing-compliance page if scope is distinct	High
Internal Audit	Create a dedicated page if this is an active service; current coverage is too thin	High
Tax Consultancy / Income Tax Compliance	Prefer one ongoing-advisory hub over several near-duplicate pages	Medium
Partnership / Proprietorship Registration	Build only if commercially important and genuinely serviced	Medium

Structured data audit

Confirmed strengths

- Homepage: valid `Organization` , `LocalBusiness` , `WebSite` , `WebPage` and location objects.
- Contact page: valid `ContactPage` , `Organization` , `LocalBusiness` and address/location objects.
- Breadcrumb markup is widespread.

Confirmed defects

- GST Return Filing FAQ JSON-LD is invalid because of an unescaped control character.
- ITR Mumbai FAQ JSON-LD is invalid for the same class of error.
- Service pages use inconsistent schema families: some have only Breadcrumbs, some are marked as Article, and GST Return Filing also uses Product/Brand/Organization blocks.
- FAQ markup is not a meaningful rich-result strategy for this business. Google states that FAQ rich results are generally limited to well-known authoritative government and health sites. Keep FAQ markup only when it matches visible content and is maintained correctly; do not treat it as a traffic feature. See Google's FAQ rich-result change.

Recommended schema model

1. One stable sitewide `Organization` / appropriate `LocalBusiness` entity with verified name, URL, logo, telephone and authoritative address.
2. `WebSite` on the homepage and `BreadcrumbList` on eligible internal pages.
3. `Service` markup for owned commercial service pages where the visible page supports it.
4. `Article` / `BlogPosting` only for genuine editorial content, with accurate author, reviewer, publication and modification dates.
5. Valid FAQ markup only where every question and answer is visible on the page.
6. Validate in Google Rich Results Test and Schema Markup Validator, then inspect the live URL in GSC.

Google recommends accurate Organization/LocalBusiness name, address, telephone and URL properties; fewer accurate properties are better than extensive inaccurate markup. See Google's Organization guidance and LocalBusiness guidance.

Internal linking and architecture

All owned priority pages are reachable from the homepage at crawl depth one. The issue is contextual relevance, not basic reachability.

Target page	Contextual inbound links found	Recommended new sources
Section 8 Company Registration	1	12A/80G page, Section 8 vs Trust guide, ITR-7 NGO guide, Form 10AB articles
LLP Annual Filing	2	July/August compliance pages already link; add Startup, future LLP Registration and ROC/annual-compliance hub
Audit Services	41	Add deeper anchors for internal/statutory/tax audit rather than repeated generic "Audit Services"
Accounting Services	51	Existing accounting cluster is useful; prioritize high-traffic MIS/finalisation/accounting guides
GST Return Filing	51	Add contextual conversion blocks from GST case-law and due-date articles where genuinely relevant
ITR Mumbai	102	Strong support; refine anchors and avoid making every industry page look templated

Confirmed broken source → target repairs

Source	Broken target	Correct treatment
ITR for Wholesale/Retail	/company-registration/	Point to the restored owned company-registration page
Beauty/Wellness and E-commerce ITR pages	two obsolete Food & Beverage URLs	Point to /itr-filing-for-food-and-beverage-industry/
Beauty/Wellness ITR page	obsolete Real Estate/Construction URL	Point to /itr-filing-for-real-estate-construction/
Finance Bill article	/msme-ssi-registration/	Point to a real Udyam/MSME page if offered, otherwise remove/rewrite the link
Trademark Classes article	/online-trust-registration/	Point to the appropriate trust/NGO service only if intent matches
GST/case-law content	missing uploaded PDF	Restore the asset or remove/update the citation

Mobile performance and CRO

Lab methodology

Two mobile runs were completed per page in headless Chromium with 4× CPU slowdown and approximately 1.6 Mbps / 150 ms network conditions. These are **LAB** results, not CrUX field results. INP was not inferred because it requires interaction/real-user data. Google’s “Good” thresholds are LCP ≤2.5s, INP ≤200ms and CLS ≤0.1; see Google Search Central’s Core Web Vitals guidance.

Page	Mobile LCP median	CLS median	Long-task time	Assessment
Homepage	6.45s	0.00	1.28s	Poor LCP
Private company registration external destination	5.66s	0.06	5.54s	Poor; also wrong business destination
GST Return Filing	3.92s	0.00	1.18s	Needs improvement
Contact	3.74s	0.00	1.29s	Needs improvement
NRI guide	3.66s	0.01	2.20s	Needs improvement
Accounting	3.33s	0.00	2.05s	Needs improvement
GST Registration	3.25s	0.00	2.82s	Needs improvement
ITR Mumbai	2.87s	0.00	1.26s	Needs improvement
Audit	2.64s	0.18	1.94s	LCP near threshold; poor CLS

The LCP element is usually an Elementor hero section or background overlay. The likely optimization path is to replace CSS-background LCP artwork with a correctly sized responsive image where appropriate, preload only the real above-the-fold asset, simplify the hero DOM, reduce unused Elementor add-on assets, and defer non-critical scripts. LiteSpeed/Hostinger caching is present, so tune the existing system before adding another overlapping optimization plugin.

Rendered conversion issues

- Mobile homepage headline contrast is weak and the text is partially obscured by the fixed CTA; desktop capture showed a large empty hero area before the main CTA/message fully appeared.
- “GET IT NOW” is generic and does not describe the next step.

- The WhatsApp button is visible above the fold, but phone links are generally below the fold.
- Contact mobile hero consumes most of the first screen before “Get in Touch With Us.”
- Accounting, GST and ITR templates render duplicate forms—two to four instances in a page/browser state.
- The common form asks for email, mobile, city and service, with several required fields. This may create unnecessary friction for high-intent mobile users.
- There is no reliable form-success analytics event, so no conversion-rate conclusion can be made.

CRO redesign principles

1. Change generic CTA copy to page-specific actions: “Speak to a CA about GST filing,” “Get an accounting quote,” or “Check my ITR requirements.”
 2. Keep one primary form per page plus the global popup; avoid repeating identical long forms.
 3. Test a short first step: Name + Mobile/WhatsApp + Service, with email/city optional or collected next.
 4. Add verified trust proof immediately beside the form: practising CA identity, response expectation, confidentiality statement and authentic service-relevant testimonial.
 5. Add a visible privacy-policy link and short data-use statement near the submit button.
 6. Prefill WhatsApp messages with the page/service context, then track only genuine WhatsApp URLs.
-

Local SEO audit

Current on-site NAP

Shahnawaz and Associates

Ground Floor, Grace Plaza, C-18, S. V. Road, near Railway Station, Momin Nagar, Jogeshwari West, Mumbai 400102

Phone: +91 98192 67015

This variant is internally consistent across the current homepage, About page, Contact page, footer and LocalBusiness markup.

External inconsistency requiring owner confirmation

Public source	Address variant
ICAI firm listing	B38, Ground Floor , Grace Plaza
Website / Magicpin / ServiceBazzar	C-18, Ground Floor , Grace Plaza
Justdial / Shuru	B-110, First Floor , Grace Plaza

Do not choose a variant based only on frequency. Confirm the current legal and client-facing location, then update the website, schema, Google Business Profile and major citations. The ICAI public firm list is also the source for the firm/practitioner identity that should be verified before publication.

GBP work still required

Because Google Business Profile was not connected, the following are **DATA NOT AVAILABLE**: primary/secondary categories, GBP-side address, services, hours, review count/rating, photos, posts, Q&A and GBP performance. Once access is provided:

1. Confirm primary category and add only genuine service categories.
2. Use the authoritative NAP and service area.
3. Add each priority service with concise descriptions and correct landing pages.
4. Publish current office/team/service photos.
5. Create a compliant review-request process and respond to every review.
6. Add UTM-tagged website/appointment links so GBP leads can be measured separately.

Competitor and search-landscape review

All four named competitors are live and relevant. The strongest recurring competitive advantage is not simply “more content”; it is **visible professional proof plus clearly packaged services**.

Competitor	Visible strength relevant to Cashahnawaz
N D Savla & Associates	Deep service structure, named operating history/scale, partner-led approach, multiple offices and explicit client segments
JVB & Co.	Very deep audit, controls, risk, cyber and advisory taxonomy plus partner/location pages
Asit Mehta & Associates	Long history, visible team/client scale, industries, audit, corporate tax and outsourced accounting
Jain Anurag & Associates	Broad registration, GST, income tax, NRI, audit, cross-border and accounting positioning

Query-specific search results also surfaced pages from SVT & Associates, DMJC & Co. and Taxpex. Their visible patterns include named CA credentials, concrete deliverables, process, response expectations, fee framing and prominent contact actions.

What to adopt: professional proof, precise deliverables, transparent process, service-specific FAQs and clear contact expectations.

What not to copy: mass-produced locality pages, unverified ratings, unsupported “best” claims, or regulatory figures without professional review.

90-day SEO growth roadmap

Days 1–7 — protect and measure

- Restore owned company-registration URL; remove external CA-firm redirects.
- Fix WhatsApp GTM trigger and implement successful form tracking.
- Confirm NAP, FRN/membership and approved practitioner bio.
- Repair invalid FAQ JSON-LD and the highest-value broken links.
- Noindex/control the AJAX parameter variants.
- Establish GA4 exploration by landing page, device, city and lead type.

Days 8–30 — optimize existing demand

- Homepage: local CA/tax-consultant positioning, visible hero, credentials, service proof and specific CTA.
- Accounting: rewrite proposition, fix "TAXZONA" copy residue, specify monthly deliverables/software/process, improve local snippet.
- NRI: named CA reviewer, remote onboarding process, jurisdiction/service scope, relevant proof and conversion block.
- ITR Mumbai: current-year professional review, valid visible FAQ, snippet test, form success tracking.
- GST Return Filing: document checklist, reconciliation deliverables, filing cadence explanation, page-specific CTA, valid Service schema.
- 12A/80G: professional legal review, broaden H1, archive/update passed deadlines, add NGO-specific service proof.
- Improve homepage and money-page mobile LCP.

Days 31–60 — close commercial gaps

- Publish owned LLP Registration and Company/ROC Compliance pages.
- Publish a dedicated Internal Audit page if actively offered.
- Decide whether GST Compliance/Consultancy is distinct enough for a page or should strengthen GST Return Filing.
- Add page-specific internal links from high-traffic articles and guides.
- Standardize money-page templates: practitioner proof, process, deliverables, documents, fee/quote rationale, FAQ, CTA.

Days 61–90 — local authority and iteration

- Complete GBP categories/services/photos/review workflow and UTM tracking.
- Correct top citations after NAP confirmation.

- Review high-impression/low-CTR pages in GSC every two weeks.
- Compare mobile vs desktop engagement and valid lead rate.
- Refresh or archive outdated content based on a CA-approved content calendar.
- Re-run crawl, schema and mobile performance tests.

Operational targets—not traffic guarantees

Target	90-day success condition
Lead ownership	Zero priority/internal URLs redirect to unrelated businesses
Measurement	One successful action = one valid GA4 key event; form, WhatsApp and phone separated
Technical hygiene	Zero invalid priority-page JSON-LD blocks; zero confirmed internal 404 links
Mobile experience	Priority-page lab LCP approaches or passes 2.5s; CLS below 0.1
Search snippets	Improve CTR on selected pages by 15–25% relative while controlling for position
Commercial visibility	Accounting, GST filing, NRI, ITR and 12A/80G pages move upward for mapped queries
Local consistency	Website, GBP, schema and priority citations use one confirmed NAP

Detailed findings register

F-01 — External redirect transfers a priority service and leads to another CA firm **CRITICAL**

Severity: CRITICAL · **Confidence:** Confirmed

Evidence: <https://cashahnawaz.com/private-limited-company-registration/> returns a one-hop 301 to <https://anamca.com/services/registration/private-limited-company-registration/>. GSC reports “Page with redirect” and selects the external URL as Google/user canonical. The destination displays Anam Shaikh & Associates, another phone/email/WhatsApp, GTM [GTM-WV5SVHJK](#) and GA4 [G-WM2MWWHY3Y](#). Four more Cashahnawaz URLs redirect to the same domain: annual private-company compliance, accounting-vs-bookkeeping, GST Council, and income-tax-deductions pages.

Affected URLs: the five redirecting Cashahnawaz URLs and all internal links pointing to them.

SEO/Business impact: Users, leads and canonical signals leave the site; Cashahnawaz has no owned private-company-registration landing page. Google treats a permanent redirect as a canonical-location signal; see Google’s redirect documentation.

Likely root cause: A legacy cross-domain migration/redirect rule or content transfer that was never removed. Ownership intent must be confirmed; this audit does not characterize it as malicious.

Recommended fix: Restore an owned page on the existing URL if Cashahnawaz provides the service. Remove the external redirect, use Cashahnawaz branding/contact/tracking, self-canonicalize, add to sitemap and update internal links. If the service is intentionally referred out, remove it from the owned SEO strategy and clearly disclose the referral rather than using a silent permanent redirect.

Manual implementation: Check Rank Math → Redirects, any redirect plugin, [.htaccess](#), Hostinger redirect rules and CDN rules for the exact five source paths. Export/backup redirect settings first. Remove only confirmed unintended rules. Publish the owned page, clear LiteSpeed/hCDN cache, recrawl, and request indexing in GSC.

Validation: Source returns 200 with no hop; page uses Cashahnawaz NAP/GTM/GA4; canonical equals source; URL Inspection shows indexable; controlled test lead reaches Cashahnawaz.

F-02 — WhatsApp and form conversion measurement is invalid/incomplete **HIGH**

Severity: HIGH · **Confidence:** Confirmed

Evidence: Published GTM version 5 has a “WhatsApp Click” link-click trigger with no filter. GA4 reports 587 WhatsApp events/585 key events, while no successful form event exists.

Affected assets: GTM-N2LHGRCX, GA4 property 546098812, every link and form.

Impact: The business cannot distinguish genuine leads from navigation clicks or calculate landing-page conversion rate.

Root cause: Missing trigger condition and no Elementor success-state implementation.

Fix: Restrict WhatsApp to approved [wa.me](#) /WhatsApp URL patterns; add a post-success Elementor lead event; validate phone tracking; mark the prior period as contaminated.

Manual implementation: In a GTM workspace, duplicate/backup the trigger. Add a regex such as [^https?:\/\/\(wa\.me|api\.whatsapp\.com\)\/](#) after confirming every live WhatsApp pattern. Configure an Elementor

success event/dataLayer or unique success page and fire one GA4 lead tag. Preview every form family and link type before publishing.

Validation: Navigation clicks do not fire WhatsApp; one WhatsApp click fires once; failed forms fire no lead; one successful form fires one lead in GTM Preview and GA4 DebugView.

F-03 — High-impression pages underperform on CTR and commercial intent HIGH

Severity: HIGH · **Confidence:** Confirmed

Evidence: ITR refund 53,708 impressions/0.21% CTR; Accounting 10,377/0.31%; NRI 10,647/0.72%; 12A/80G 11,102/0.61%; GST Return Filing 2,413/0.62%.

Impact: Google visibility is not translating proportionally into qualified visits.

Root cause: Mixed informational/service intent, generic or overlong snippets, weak visible authority and insufficient differentiation.

Fix: Optimize one owner page per mapped query cluster; improve title/meta/intro, professional proof and service-specific conversion block.

Manual implementation: Use the query map in this report. Change no URL unless consolidation is specifically approved. Record pre-change GSC metrics, publish one page group at a time, request recrawl and compare 28-day periods controlling for average position.

Validation: Relative CTR improves without query cannibalization; valid lead rate becomes measurable.

F-04 — Practitioner and firm trust proof is missing while About counters show zero HIGH

Severity: HIGH · **Confidence:** Confirmed rendered check

Evidence: About counters remain at zero after rendering; homepage/About body contains no visible practitioner name, FRN, membership number or ICAI identity. Public ICAI data provides candidate details that require owner verification.

Impact: Financial-service visitors cannot easily verify who is accountable for advice, weakening trust and differentiation.

Root cause: Generic agency template and unconfigured counters; professional identity not integrated into the content model.

Fix: Remove zero counters; publish a verified practitioner profile, firm identity, experience, review process and authentic proof.

Manual implementation: In Elementor About template, remove or populate counters only with defensible numbers. Add a named bio with verified credentials, LinkedIn/professional profile, areas of practice and regulatory review role. Reuse a compact verified reviewer block on tax pages.

Validation: Rendered home/About pages display accurate identity/proof; no zero or unverifiable claims remain.

F-05 — Mobile LCP is above Google’s “Good” threshold on every sampled page **HIGH**

Severity: HIGH · **Confidence:** Confirmed lab, field data unavailable

Evidence: Two-run mobile medians: homepage 6.45s; GST Return 3.92s; Contact 3.74s; NRI 3.66s; Accounting 3.33s; GST Registration 3.25s; ITR 2.87s; Audit 2.64s. Audit CLS is 0.18.

Impact: Slower first impressions and lower mobile engagement; mobile engagement is already 13.7 percentage points below desktop.

Root cause: Elementor background/overlay LCP elements, large DOMs, long main-thread tasks and redundant template assets.

Fix: Optimize the existing LiteSpeed/Hostinger setup; simplify hero/templates; reduce unused add-ons; use responsive/preloaded LCP assets; reserve layout space.

Manual implementation: Work on staging/backup. Use Chrome/Lighthouse element diagnostics plus this report’s LCP element. Change one template family at a time, purge cache, test twice on mobile and check visual regressions.

Validation: Three comparable mobile lab runs; LCP ≤ 2.5 s target, CLS < 0.1 ; later confirm GSC/CrUX field data when available.

F-06 — Current office address conflicts across public sources **HIGH**

Severity: HIGH · **Confidence:** Confirmed conflict; authoritative answer requires owner

Evidence: Website C-18 Ground Floor; ICAI B38 Ground Floor; Justdial/Shuru B-110 First Floor.

Impact: Potential clients and local-search systems receive conflicting location data.

Root cause: Office move/unit-format changes not propagated consistently.

Fix: Owner confirms one authoritative legal/client-facing address; standardize website, schema, GBP and priority citations.

Manual implementation: Create a source-of-truth NAP sheet. Correct owned assets first, then GBP, ICAI if required, and major directories. Avoid creating a duplicate GBP.

Validation: Search brand/address variants; all priority sources show the confirmed form and correct map pin.

F-07 — Time-sensitive tax/compliance content lacks a controlled review lifecycle **HIGH**

Severity: HIGH · **Confidence:** Confirmed dates; replacement law requires CA review

Evidence: Passed 2020–21, 2021–22 and 2025 references remain on pages still earning impressions/clicks.

Impact: Trust, user decision quality and regulated-content accuracy risk.

Root cause: Pages are updated irregularly without explicit archive/current status or named reviewer.

Fix: Professional review; update, archive or consolidate; add “last reviewed,” reviewer and source notes.

Manual implementation: Export the regulated-page list, assign a practising CA, preserve historical context where useful, avoid silently replacing figures, and maintain a quarterly calendar plus event-driven updates.

Validation: Every priority regulated page has current/historical status, CA approval and accurate visible dates.

F-08 — Commercial service coverage is incomplete **HIGH**

Severity: HIGH · **Confidence:** Confirmed crawl and competitor comparison

Evidence: No owned Private Limited registration page; LLP formation absent; ROC/company compliance absent; Internal Audit thin; GST consultancy/compliance not distinctly served. Competitors package these areas more clearly.

Impact: The site cannot rank or convert well for services without an owned intent-matched destination.

Root cause: Content evolved around articles and a subset of services instead of a complete revenue-service architecture.

Fix: Restore/build pages in priority order, only for genuine services, using one canonical owner per intent.

Manual implementation: Confirm service, target client, process, documents, deliverables, pricing approach and responsible practitioner before drafting. Link from nav/hubs and relevant articles; add to sitemap.

Validation: Each priority service has one owned indexable page, no overlap, appropriate internal links and GSC query coverage.

F-09 — Elementor AJAX variants are crawlable and indexable **MEDIUM**

Severity: MEDIUM · **Confidence:** Confirmed crawl and GSC

Evidence: `/?jkit-ajax-request=jkit_elements` returns 200, `index, follow`, no canonical; GSC: crawled—currently not indexed. A page-2 parameter variant also exists.

Impact: Crawl waste and risk of low-quality parameter URLs entering the index.

Root cause: JKit/Elementor endpoint produces full HTML without indexing controls.

Fix: Prevent internal discovery where possible; return appropriate endpoint content/status; add `noindex`/canonical handling at plugin/server level without blocking Google before noindex is seen.

Manual implementation: Identify the JKit component that creates links; update plugin/configuration first. If needed, add a narrowly scoped Rank Math/filter/server rule for the exact parameter. Test functionality before deployment.

Validation: Endpoint functionality still works; URL is noindex or canonicalized appropriately; no new parameter variants appear in crawl/GSC.

F-10 — An indexed duplicate GST page declares an HTTP canonical

MEDIUM

Severity: MEDIUM · **Confidence:** Confirmed source and GSC

Evidence: `/gst-registration-services-india-a-guide-to-gst/` is indexed; source canonical is the HTTP version; Google selects HTTPS; page is absent from sitemap and overlaps the main GST registration page/guide.

Impact: Conflicting consolidation signals and diluted maintenance/linking.

Root cause: Legacy manual canonical plus content duplication.

Fix: Decide the owner page. Usually consolidate this low-performing legacy page to the main GST Registration page with a relevant 301; otherwise make it uniquely informational, HTTPS self-canonical and intentionally linked/sitemapped.

Manual implementation: Compare content and backlinks first. If consolidating, map the closest section, add unique useful content to the destination, implement one-hop 301, remove internal links to source.

Validation: GSC eventually shows the chosen canonical; only the owner page receives query impressions.

F-11 — Confirmed internal links point to 404 URLs MEDIUM

Severity: MEDIUM · **Confidence:** Confirmed crawl

Evidence: Company registration, two Food & Beverage variants, Real Estate/Construction variant, MSME registration, Trust registration and one PDF link return 404 from real source pages.

Impact: Lost user journeys, wasted internal authority and reduced confidence.

Root cause: Slug changes/content removals without source-link maintenance.

Fix: Update source links to exact current destinations; use 301 only where a real equivalent exists.

Manual implementation: Use the source→target table in this report; edit Elementor/article links, clear cache and crawl again. Do not redirect unrelated removed pages to the homepage.

Validation: Zero internal 404 edges in a fresh crawl.

F-12 — Priority-page structured data is invalid and inconsistent MEDIUM

Severity: MEDIUM · **Confidence:** Confirmed JSON parsing

Evidence: Invalid FAQ JSON-LD on GST Return Filing and ITR Mumbai; inconsistent Article/Product/Breadcrumb-only models across services.

Impact: Google cannot reliably parse the invalid blocks; entity/service meaning is inconsistent.

Root cause: Manual custom-HTML schema plus plugin-generated schema without one source of truth.

Fix: Choose Rank Math or one controlled schema source; use Organization/LocalBusiness + Service/Breadcrumb/Article as appropriate; remove invalid/redundant manual blocks.

Manual implementation: Back up current schema. In Rank Math page schema settings and Elementor custom HTML widgets, identify which source outputs each block. Escape line breaks correctly or regenerate valid JSON-LD.

Validation: JSON parser, Schema Validator, Rich Results Test and GSC URL Inspection pass with content matching the page.

F-13 — Mobile conversion templates contain generic CTAs, excess hero space and duplicate forms MEDIUM

Severity: MEDIUM · **Confidence:** Confirmed browser render

Evidence: Generic “GET IT NOW”; contact hero pushes the form below the first screen; 2–4 duplicate forms on sampled templates; common form requires email/mobile/city/service; phone generally below fold.

Impact: Friction and unclear next step, especially on mobile.

Root cause: Multiple Elementor template/popup/form instances and generic global components.

Fix: One page-specific primary action, one main form, compact mobile hero, visible phone/WhatsApp and trust near the form.

Manual implementation: Inventory global header/popup/footer templates and page forms; remove duplicates on staging; shorten and label form; add service-specific CTA copy and privacy link.

Validation: Mobile browser test at 390px; no overlap, primary action visible, one successful submission tracked once.

F-14 — Contextual internal linking is uneven for commercial pages

MEDIUM

Severity: MEDIUM · **Confidence:** Confirmed link graph

Evidence: Section 8 has one contextual inbound link; LLP Annual Filing has two, while ITR Mumbai has 102.

Impact: Weaker discovery/relevance reinforcement for underperforming registration/compliance pages.

Root cause: Template navigation is strong, but article-to-service links were added unevenly.

Fix: Add source-relevant contextual links using descriptive, varied anchors and lifecycle relationships.

Manual implementation: Start with 12A/80G → Section 8, ITR-7/Form 10AB → Section 8, Startup/future LLP Registration → LLP Annual Filing, and high-traffic GST guides → GST services.

Validation: Link graph shows additional unique contextual sources; anchors accurately describe destination; no sitewide keyword-stuffed blocks.

Data limitations and what is still needed

1. **Google Business Profile access:** required for a complete GBP/category/review/performance audit.
 2. **Authoritative office address:** owner must confirm the correct unit/floor.
 3. **Professional credentials:** confirm current FRN, membership, title and approved public wording.
 4. **WordPress Administrator and hosting access:** required to confirm plugin versions, redirect rule source, staging/backup and exact implementation screens.
 5. **GSC UI-only reports:** the API does not expose Manual Actions, Links or Core Web Vitals report groups. A full-permission user should manually confirm those screens.
 6. **Field Core Web Vitals:** PageSpeed API quota was unavailable and the GSC API does not expose CWV groups; this report labels browser metrics as LAB.
 7. **Regulatory facts:** all current legal/tax figures and replacement wording require practising-CA review.
 8. **Competitor metrics:** competitor traffic, conversion rates and backlink counts were not available and were not estimated.

This audit is a prioritized diagnosis and implementation guide. It does not promise rankings or traffic. Results depend on implementation quality, professional accuracy review, competitor changes and Google's systems. Measure progress using valid conversion events, GSC query/page data and a fresh technical validation after each implementation phase.

Prepared from live first-party data and public-site evidence | Audit date 28 August 2026
